

hINF is a medical tele-treatment platform for efficient communication between patients and their clinics.

Our aim is to **ease the communication** between the parties **with** secure and modern chat based **digital appointments**.

Digital appointments aim to **replace** at least **50% of the current appointments** to the clinic.

hINF is **built by people** with the right background and **with the vision to succeed**.

The platform is developed closely with patients, doctors and nurses to provide the parties with a tool they need. In addition to digital appointments, hINF includes a **shared monitoring tool** and a **smart notification system**.

7 Clinics accessed in Europe & Africa
8 Market researches
200 Patient survey
1 Pilot signed
Web & Android platform for HIV+ patients and their care teams

During our market researches in different countries and after getting the chance to speak with the patients, the response is always the same – “**YES!**”, and then– “**HOW SOON?**”.
The correct response is “**SOON!**”.
